- Very good teacher, very understandable class was interesting.
- I consider here to be the best math 120 instructor
- I really enjoyed here as a teacher 😊
- Teacher was amazing. Book hard to understand and follow!
- The textbook was hard to understand and was unclear about the method while giving examples
- I’ve taken this course a couple of times, and I was finally able to learn the material because of Danelle’s teaching. Good job!
- She was very helpful towards all the homework and tests. I would tell other people to take her.
- Danelle was overall a very good instructor. She made learning math easy and understandable. I recommend her to anyone.
- Danelle Clarke helped me out a lot to understand the material and do well in the class. I have taken this class several times with other instructors and didn’t learn a thing. So she is a very effective teacher.
- I loved the random facts. She was a great teacher I actually understood the math!
• Great teacher but grades too harshly for homework. Since we cannot check half our answers it was hard to know if it was correct. If it wasn’t then we received low scores on our hw. Even if we tried our best... isn’t that what test are for?

• Very clear explanations of subject. Made class interesting with “useless fact of the day” and very helpful when confused about anything. Probably one of the best math courses I’ve taken in awhile. 😊 AH!

• I loved taking math with Danelle. She knew the material and explained it all in a really clear way. She was enthusiastic about the course and made learning fun. I’m HORRIBLE at math and have always detested math courses but I really learned a lot and she was there to help if I got frustrated. I’ve recommended her class to everyone I know that still needs to take math 120. She made it painless.
