### FREE RESPONSE:

- I really liked the random fact time during class. It was interesting and gave my mind a break.
- I loved her enthusiasm in the classroom. The learning environment was very positive.
- Great personality fun to be taught by!
- Great course!
- I would really rather think a problem through in my head than sit in a group and share wrong answers with other students. Also, what good does it do to assign a problem to the class and then not give us the answer? How do we know if we did it correctly? Many times, I was left wondering......
- Well, I never did use the CD book. Never had a reason to look at it. The online homework was easy to access and the review quizzes were very helpful. Everything was pretty well-organized.
- Professor Clarke was an amazing teacher. She made the math easy to learn and follow. I would recommend her to anyone needing to take Math 120.
- Clarke is an amazing professor. I love her class. She explained things in a way I could understand the material.
• I understand that it is the new age thing to have the homework online and it is helpful, but paying 70 dollars just to do your homework after you paid for the class already is ridiculous. Maybe you should include the homework Math lab fee in the course fees so that way students don’t have the opportunity to fail just because they can’t afford to the homework right away.

• This was an excellent class. I have struggled with math in the past but you presented and taught math in a way that I could understand and enjoy.

• Danelle Clarke was one of the best teachers I’ve had so far. She is very clear in her lectures, and always makes note of her office hours in case students still had problems. I had no problem paying attention, as she found ways to make her lectures interesting and eye-catching. I would recommend her to anyone for a math class, and I feel like I will keep a lot of what I learned in her class with me as I continue on in my schooling.

• I feel like I had a better connection with the T.A. than with the actual teacher. I didn’t have the urge to want to go to class either. I only went for the information to learn.

• Great teacher. Firm, but willing to help.

• Love the random facts

• loved the random facts

• Amazing teacher. She is awesome. Her classes were always interesting and she is very good at explaining what she is teaching.

• Also love how the set up of the class was.

• Great class.

• useless facts were great!

• good job

• thank you!

• The “help me solve this” on the homework didn’t exactly correspond with the notes we wrote from class.

• great teacher

• I think that the useless facts helps because a lot of people does not have a long attention span like I do.

• The useless facts were great.

• She made the class very interesting, and had a way of keeping the class focused.
• good job

• thank you

• The homework on the internet was much more confusing than the teacher grading it. And the test’s were rough because it was multiple choice, I feel like you should bet partial credit for partial work.

• the class was good but at times it was hard for me

• It was fun and really great environment to learn.

• Why did we need to buy the book when we didn’t actually need it in or out of class?

• The “group” work is pointless. Other than that class was great.

• I liked this course a lot. It was a great way to refresh my math skills. I also enjoyed and benefited from the instructors teaching methods.

• I am very bad at math and this instructor helped me tremendously

• She is a great teacher. She explains all the material so I was able to understand it all. She also kept the class interesting by giving useless fact which gave us a few minutes to re-boot our brains back into math mode.

• Overall okay!

• You lost me in week two. Not because I didn’t understand, but because I felt that there was really no motivation for me to attend your lectures, thus I answered most parts neutral. Part of it is because of the large class size.

• Thank you for the random facts everyday!
