EXAM 2: Monday May 1 in class

You may bring 1 sheet of paper (8.5 x 11) with formulas/definitions/etc, and you may use both sides. Your notes must be in your own handwriting, not typed.

You may also bring the formula sheet you made for Exam 1 to use during Exam 2.

I will provide the probability distribution chart (from the course website) for you to use during the exam as well.

You may bring a calculator to use during the exam, but it must not be your smart phone (i.e. no internet access.)

The exam will cover the second half of Chapter 3 (Sections 3.6-3.12, excluding 3.10: order statistics) and Chapter 4 (Sections 4.1-4.5).

The best practice for the exam is to review your class notes, examples, and homework assignments. Please take a look at the HW solutions posted on the course website to make sure you are doing the problems correctly.

Practice exam problems will be posted on the course website.

Additional office hours: Friday Apr 28, 3-4pm (or by appointment)
