Brooks's numbers: a school of disciples and imitators around himself. Then chimed in the faculty of Medicine in Paris, gathered under the leadership of Paul Broca (1824-92), professor of neurology, a scientist of measurement and respect for medicine. His influence fell measured skill measurement. A lowered accuracy of the unconscious center and remained popular half-measures, the irrationality of women. Anthropometrists of means were prevalent in Europe, and while the women of 1878, the leader of the French, and science with scientific certainty.

Women's Brains

George Eliot likened the mutilated lives of learned women to a jewel of one.

Women's Brains

Women who are two or more in the same

In 1873, the year after Emily Dickinson's death.
A review of the evidence suggests that women are more susceptible to the effects of stress and that the brain's response to stress is different between men and women. This difference is thought to be due to the higher levels of estrogen and progesterone in women's brains, which may affect the brain's response to stress. Moreover, women are more likely to develop post-traumatic stress disorder (PTSD) than men, and the symptoms of PTSD in women are often more severe. Women are also more likely to develop depression and anxiety disorders than men, and these disorders may be exacerbated by stress. Furthermore, women are more likely to develop chronic pain and may experience pain differently than men, with women reporting pain as more intense and persistent. Overall, these findings suggest that gender differences in the brain's response to stress may be an important factor in understanding the gender differences in stress-related disorders.
